//		Description
	Use	The special formula of this product allows for combination with glass, porcelain and ceramic materials, and is also suitable for firing with sterling silver findings or wires (SV925 and higher quality recommended).
	Composition	Art Clay Silver Paste Type consists of pure silver particles, a binding agent and water. The binding agent is produced from harmless pulp fiber. During firing, the pure silver particles solidify. The binding agent consists of carbon, hydrogen, and oxygen resulting in the release of harmless carbon dioxide and steam during firing.
	Firing	This product is low-fire clay that can be fired at 650°C/1200°F, and is pure silver (99.9%) after firing.
